## **ABSTRACT**

Disclosed is an aqueous solution of a chromium salt, in which the oxalic acid content is 8% by weight or less relative to chromium. In the aqueous solution of the chromium salt, the total organic carbon content is 4% by weight or less relative to chromium. The chromium salt is preferably a chromium chloride, a chromium phosphate, or a chromium nitrate. The chromium chloride preferably contains a basic chromium chloride represented by the composition formula  $Cr(OH)_xCl_y$  (wherein  $0 < x \le 2$ ,  $1 \le y < 3$ , and x + y = 3). The chromium phosphate is preferably one represented by the composition formula  $Cr(H_{3-3/n}PO_4)_n$  (wherein n is a number satisfying  $2 \le n \le 3$ ). The chromium nitrate is preferably a basic chromium nitrate represented by the composition formula  $Cr(OH)_x(NO_3)_y$  (wherein  $0 < x \le 2$ ,  $1 \le y < 3$ , and x + y = 3).
